Stainless Roadster Tilt Steering Column

We're excited to announce a new addition to our line of steering column products. We've taken our popular Roadster style steering column and added the modern convenience of 5 position tilt. This new column is ideal for classic trucks, roadsters, and the early 1953-62 Corvette.

With only 5-1/2" from the bottom of the dish to the top of the column's shroud, this compact space-saving design has a nostalgic look and full tilt functionality. This new roadster style tilt column fits snug against the dash and, compared to a standard tilt column, allows for an additional 2" of clearance in the driver's seat. Each column is CNC machined from high-grade 304 stainless steel.

This column comes with a sleek 1-3/4" tube diameter and is available in a variety of lengths and finishes including paintable mill, polished, and black or custom powder coat. Each column comes standard with a GM 4-1/4" wiring connector, horn functionality, canceling cam, turn signal arm, tilt lever, and hazard knob. All Flaming River steering columns are proudly made in the USA.
